paragporal crystal protein cry4Aal - Bacillus thuringiensis subsp. israelensis

N;Alternate names: paragporal crystal protein cryIVA

N;Alternate names: paragporal crystal protein cryIVA

C;Species Bacillus thuringiensis subsp. israelensis

C;Accession: A56858; S48691

R;Ward, B.S.; Bllar, D.J.

Nucleic Acids Res. 15, 7195,

A;Title: Nucleotide sequence of a Bacillus thuringiensis var. israelensis gene encoding

A;Reference number: A26858; MUID:88015571; PMID:2821500

A;Reference contact and a sequence of a Bacillus thuringiensis var. israelensis gene encoding

A;Reference number: A26858

A;Molecule type: DNA

A;Residues: 1-1180 cMARA

A;Coss.references: UNIPROT:P16480; UNIPRAC:UPI000016EA42; GB:Y00423; NID:940351; PIDN::

A;Note: the authors translated the codon GCA for residue 308 as Thr

R;Nishimcto, T.; Yoshisue, H.; Ihara, K.; Sakai, H.; Komano, T.

R;Nishimctional analysis of block 5, one of the highly conserved amino acid sequence on number: 848691; MUID:94307434; PMID:7913448
                                                                                   parasporal crystal parasporal crystal
                                                                                                                                                                                                                                                                                                              crystal

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

rasporal crystal protein cry7Aal - Bacillus thuringiensis
Alternate names: parasporal crystal protein cryIIC
Species: Bacillus thuringiensis
Accession: A48944
Accession: A48944
Lambert, B.; Hofte, H.; Annys, K.; Jansens, S.; Soetaert, P.; Peferoen, M.
Ph. Environ. Microbiol. 58, 2536-2542, 1992
Title: Novel Bacillus thuringiensis insecticidal crystal protein with a silent activit
Reference number: A48944; MUID:92384571; PMID:1514800
Contents: B75137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TREATURE: PRINTING TO THE MAINTENANCE TO THE MODE OF T

-!- FUNCTION: Promotes colloidosmotic lysis by binding to the midgut
epithelial cells of insects. Active on various scarabaeid beetles.
-!- DEVELOPMENTAL STAGE: The crystal protein is produced during
sporulation and is accumulated both as an inclusion and as part of
the spore cost.

Ha novel class of mosgutiocidal delta-endotoxin, Cry19B, encoded by a Bacillus thuringiensis servora higo gene.";

Syst. Appl. Microbiol. 21:179-184(1998).

-! FUNCTION: Promotes colloidosmotic lysis by binding to the midgut epithelial cells of mosquitos.

-! DEVELOPMENTAL STAGE: The crystal protein is produced during sportlation and is accumulated both as an inclusion and as part of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                             This sequence represents an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nuclei caid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidoperan or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for sesociated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin presence of delta-endotoxin or delta-endotoxin or delta-endotoxin associated proteins or nucleic acids in products or organisms.
                                                                                                                                                                                           isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CAAGACAAAACAGTATGGACACAATTTATTAAAATGGGAGAAATTTTTGTTGATACACCG 420

This sequence represents an isolated delta-endotoxin. Some of the delta-endotoxin coding sequences of the invention have alternative start codons, producing more than one protein from a single open reading frame. The nucleic acid sequences of the invention are useful in DNA constructs or expression cassettes for transformation and expression in plants and bacteria. The nucleic acids and corresponding polypeptides are useful for killing lepidopteran or coleopteran pests. Compositions containing the delta-endotoxins of the invention, and methods for their production, are useful for the production of organisms with pesticide resistance, specifically bacteria and plants. These organisms are useful for generating altered or improved delta-endotoxin or delta-endotoxin-associated proteins that have pesticidal activity, or for detecting the presence of delta-endotoxin or delta-endotoxin-associated proteins or nucleic acids in products or organisms.
                                                                                                                                                                                                                                                                                                                                 isolated delta-endotoxin and delta-endotoxin-associated nucleic acids polypeptides, useful for killing lepidopteran or coleopteran pests or producing organisms with pesticide resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          391 AAAATGGGAGAAATTTTTGTTGATACACCGTTAACAGAAAGCATAAAACAGCTAAAGTTA 450
